- D. things happening now or around now

18. I ----- my cousin there at 9 a.m. to set up our stall.

- A. Will meet
- B. will be meeting
- C. am meeting
- D. meet

PAGE THREE

QUESTION NUMBER TWO:

(13 points)

It's no accident that the symbol of the World Wide Fund for Nature is a giant panda. These animals are cute or beautiful, or both, and of course we all want to save them. This popularity enables organisations such as the WWF to raise money to support a range of critically endangered species. However, less well-known or 'exciting' creatures are far more likely to become extinct because they don't get enough attention from researchers. Invertebrates (animals without a backbone) make up over 90% of all the creatures on Earth, but get only a tiny percentage of the money available to protect our wildlife.

And what about those creatures that many people would find positively ugly? With its tiny eyes, big mouth and slimy pink body, the blobfish is far from attractive. This marine creature lives deep in the ocean, where the pressure is very high. As a result, it has tiny fins and no skeleton, which keeps it from being crushed by the water pressure. Unfortunately, when fishing boats sweep the ocean floor, looking for other fish and crustaceans, these fish can get swept into the nets accidentally.

The threat faced by the pangolin, however, is far from accidental. They are more often targeted by poachers than any other animal in the world. Unique among mammals, it is covered in scales, like a reptile. They may not look very cuddly or cute, but these scales are highly prized in traditional Chinese medicine, which has caused the population of pangolins in China to fall by around 90% since the 1960s. Their scales protect them from their natural predators, but it's simple for a poacher to just pick them up.

Other creatures become endangered precisely because people find **them** ugly. Take the aye aye for example. Found only on the island of Madagascar, the aye aye is the world's largest nocturnal primate. During the day they sleep in nests in the trees, coming out to hunt at night. They are solitary creatures, furry, and harmless but unfortunately, they are often killed.

1. Write down the sentence which shows the threat faced by the pangolin is far from accidental. (3 points)

2. What does the underlined pronoun "them" refer to? (2 points)

3. Find a synonym for "someone who illegally catches animals". (2 points)

4. The blobfish adapt to their surroundings in several ways. Mention two ways from them. (2 points)

5. There are many reasons that make animals as invertebrates are far more likely to be extinct. Mention two reasons for this. (2 points)

6. Since 1978, over 100 Arabian oryxes have been bred in captivity in Jordan. Think about this statement; write down your point of view about the ways to reintroduce them to the wild in two sentences. (2 points)

THE END
